AB - CN1168469 NOVELTY - *The hydrogen sulfide gas monitoring instrument features its sensitive porous diffusion electrode of Au, Pt and Rb and with 0.02-0.4 mm diameter; auxiliary netted electrode corresponding to sensitive electrode material and of 100-400 mesh; standard calomel reference electrode; sulfuric acid electrolyte whose concentration is 10-28% with additive comprising 0.5-1.5% concentration NaCl, 1-3% glycerine and 0.1-0.5% hexamethylenetetramine; and a stable 0.3-0.8V voltage applied between the sensitive electrode and reference electrode. The present invention has quick response time and high sensitivity.*
